

WHAT IS CLAIMED IS

5

1. A retransmission control method for a
multicast information distribution service which
distributes multicast information with respect to a
plurality of wireless terminals within a service
10 area from an information distribution apparatus via
a wireless region, comprising the steps of:

(a) transmitting a retransmission request for
information which requires retransmission, from an
arbitrary wireless terminal to the information
15 distribution apparatus, at a timing determined by
the wireless terminal when the information which
requires retransmission is generated;

(b) after receiving the retransmission request
for the information from the arbitrary wireless
20 terminal within the service area, notifying
retransmission information indicating the
information requested by the retransmission request
with respect to each of the wireless terminals
within the service area from the information
25 distribution apparatus, and retransmitting the
information requested by the retransmission request
from the information distribution apparatus at a
predetermined timing; and

(c) making no retransmission request for the
30 information from each of the wireless terminals if
the retransmission information is received by each
of the wireless terminals before the predetermined
timing, so that each of the wireless terminals
receives the information retransmitted from the
35 information distribution apparatus at the
predetermined timing.

00010852 080204

2. The retransmission control method for the multicast information distribution service as claimed in claim 1, further comprising the step of:

(d) intensively managing in the information distribution apparatus retransmission requests for the same information made with respect to the same multicast information distribution service until the predetermined timing, and retransmitting from the information distribution apparatus information related to intensively managed retransmission requests at the predetermined timing.

15

3. The retransmission control method for the multicast information distribution service as claimed in claim 1, further comprising the steps of:

(d) including information related to the predetermined timing at which the information requested by the retransmission request is retransmitted in the retransmission information, and notifying each of the wireless terminals within the service area from the information distribution apparatus information related to a transmission channel and a transmission timing for notifying the retransmission information and information related to a transmission channel for retransmitting the information requested by the retransmission request; and

30

(e) receiving the retransmission information by each of the wireless terminals within the service area based on the information which is received from the information distribution apparatus and is related to the transmission channel and the transmission timing for notifying the retransmission information, and receiving the information

35

FOUO - 080000

retransmitted from the information distribution apparatus based on the information related to the transmission channel for retransmitting the information and the information related to the predetermined timing included in the retransmission information which are received from the information distribution apparatus.

10

4. The retransmission control method for the multicast information distribution service as claimed in claim 1, further comprising the step of:

15 (d) managing the information requested by the retransmission request in categories according to a predetermined rule, and managing timings for retransmitting the information for each of the categories, in the information distribution apparatus.

20

25 5. The retransmission control method for the multicast information distribution service as claimed in claim 1, further comprising the step of:

(d) controlling an upper limit value of a number of retransmissions of the information requested by the retransmission request depending on the multicast information which is distributed from the information distribution apparatus.

30

35

6. A retransmission control system for a

00010859 080904

multicast information distribution service which distributes multicast information with respect to a plurality of wireless terminals within a service area from an information distribution apparatus via
5 a wireless region, comprising:

timing determination means, in each wireless terminal, for determining a timing at which a retransmission request for information which requires retransmission is to be transmitted when
10 the information which requires retransmission is generated;

first retransmission control means, in each wireless terminal, for transmitting the retransmission request for the information with
15 respect to the information distribution apparatus at the timing determined by said timing determination means;

retransmission control information managing means, in the information distribution apparatus,
20 for managing retransmission information indicating the information requested by the retransmission request after receiving the retransmission request for the information from an arbitrary wireless terminal within the service area; and

25 second retransmission control means, in the information distribution apparatus, for transmitting information related to the retransmission request indicated by the retransmission information to each wireless terminal within the service area at a
30 predetermined timing,

wherein each wireless terminal makes no retransmission request for the information by the first retransmission control means if the retransmission information is received before the
35 timing determined by said timing determination means, so that each wireless terminal receives the information retransmitted from the information

00010222 000001

distribution apparatus at the predetermined timing.

5

7. The retransmission control system for the multicast information distribution service as claimed in claim 6, further comprising:

10 distribution information managing means, in the information distribution apparatus, for intensively managing retransmission requests for the same information made with respect to the same multicast information distribution service until the predetermined timing,

15 said second retransmission control means retransmitting information related to the retransmission requests intensively managed by said distribution information managing means at the predetermined timing.

20

8. The retransmission control system for the multicast information distribution service as claimed in claim 6, wherein:

25 information which is related to the predetermined timing at which the information requested by the retransmission request is retransmitted, is included in the retransmission information,

30 said information distribution apparatus notifies each of the wireless terminals within the service area information related to a transmission channel and a transmission timing for notifying the retransmission information and information related to a transmission channel for retransmitting the

00010858 080204

information requested by the retransmission request,
by the second retransmission control means, and

5 said first retransmission control means in each
wireless terminal receives the retransmission
information based on the information which is
received from the information distribution apparatus
and is related to the transmission channel and the
transmission timing for notifying the retransmission
information, and receives the information
10 retransmitted from the information distribution
apparatus based on the information related to the
transmission channel for retransmitting the
information and the information related to the
predetermined timing included in the retransmission
15 information which are received from the information
distribution apparatus.

20

9. The retransmission control system for
the multicast information distribution service as
claimed in claim 6, further comprising:

managing means, in the information distribution
25 apparatus, for managing the information requested by
the retransmission request in categories according
to a predetermined rule, and managing timings for
retransmitting the information for each of the
categories.

30

10. The retransmission control system for
35 the multicast information distribution service as
claimed in claim 6, further comprising:

retransmission control information managing

00010252-080201

means, in the information distribution apparatus,
for managing an upper limit value of a number of
retransmissions of the information requested by the
retransmission request depending on the multicast
5 information which is distributed from the
information distribution apparatus.

10

11. A retransmission control apparatus
which is provided in an information distribution
apparatus which distributes multicast information
with respect to a plurality of wireless terminals
15 within a service area via a wireless region and
controls retransmission of information, comprising:
retransmission information transmission control
means for notifying retransmission information
indicating information requested by a retransmission
20 request with respect to each of the wireless
terminals within the service area after receiving
the retransmission request from an arbitrary
wireless terminal within the service area; and
retransmission control means for transmitting
25 the information requested by the retransmission
request and indicated by the retransmission
information at a predetermined timing, so that each
of the wireless terminals determines whether or not
to make a retransmission request for the information
30 by referring to the retransmission information
notified by said retransmission information
transmission control means when information which
requires retransmission is generated.

35

00010353-0004
F00000-23501660

12. The retransmission control apparatus as claimed in claim 11, further comprising:

distribution information managing means for intensively managing retransmission requests for the same information with respect to the same multicast information distribution service until the predetermined timing is reached,

said retransmission control means retransmitting information related to the retransmission requests intensively managed by said distribution information managing means at the predetermined timing.

13. The retransmission control apparatus as claimed in claim 11, wherein:

information which is related to the predetermined timing at which the retransmission of the information requested by the retransmission request is made, is included in the retransmission information,

the retransmission control means notifies each of the wireless terminals within the service area information related to a transmission channel and a transmission timing for notifying the retransmission information and information related to a transmission channel for retransmitting the information requested by the retransmission request, so that each of the wireless terminals within the service area receives the information which is retransmitted, based on the information included in the retransmission information and the information which is notified by said retransmission control means.

14. The retransmission control apparatus as claimed in claim 11, further comprising:

managing means for managing the information requested by the retransmission request in

5 categories according to a predetermined rule, and managing timings for retransmitting the information for each of the categories.

10

15. The retransmission control apparatus as claimed in claim 11, further comprising:

retransmission control information management

15 control means for controlling an upper limit value of a number of retransmissions of the information requested by the retransmission request depending on the multicast information which is distributed.

20

16. A wireless terminal which receives multicast information distributed from an information distribution apparatus via a wireless region, and receives information retransmitted from the information distribution apparatus according to a retransmission control, comprising:

25 timing determination means for determining a timing for transmitting a retransmission request for information which requires retransmission; and

30 retransmission control means for transmitting the retransmission request for the information with respect to the information distribution apparatus at the timing determined by said timing determination means,

35 said retransmission control means making no

10

15

20

25

35

area, comprising:

notifying means for notifying retransmission information which indicates that predetermined information is requested by a retransmission request to each of the wireless terminals within the service area, in response to the retransmission request from an arbitrary wireless terminal within the service area.

10

19. The wireless base station as claimed in claim 18, further comprising:

retransmitting means for retransmitting the predetermined information requested by the retransmission request to each of the wireless terminals within the service area, at a timing which can be set arbitrarily.

20

20. The wireless base station as claimed in claim 19, wherein said retransmitting means copes with one retransmission of the predetermined information with respect to a plurality of retransmission requests which request the predetermined information, if the retransmission request requesting the predetermined information is received from one or more wireless terminals within the service area before the predetermined information is retransmitted to each of the wireless terminals within the service area.

35

00010858:080204

21. A wireless terminal which is usable within an arbitrary service area, comprising:

retransmission request means for making a retransmission request with respect to a wireless base station when predetermined information which requires retransmission is generated; and

control means for discontinuing transmission of the retransmission request for the predetermined information from said retransmission request means when notified of retransmission information which indicates that a retransmission request for the predetermined information is made from another wireless terminal within the arbitrary service area at a timing before said retransmission request means makes the retransmission request.
